

Training Object™ Line

Training Object Line is a small scale table top production line for training in industrial automation.

Focus in development has been small scale, flexibility and high end technology to a reasonable price.

The production line consist of two or three Training Objects, Sorting, Assembling and ASRS. Each object can be used stand alone or connected in different combinations as a complete line.

Each of the objects has a premounted PLC system, Siemens S1200 with accessories, are easy to move by handles and can be placed on a regular table.

A complete system starts with sorting of the different materials then assembling the product and that finally will be stored in the ASRS system.

Tasks that can be made:

PLC programming, HMI systems, Industrial communication, Pneumatics, Sensor technology, Linear units, Servo systems (additional), Conveyor and Vacuum.

Additional products that can be added:

Laser sensor

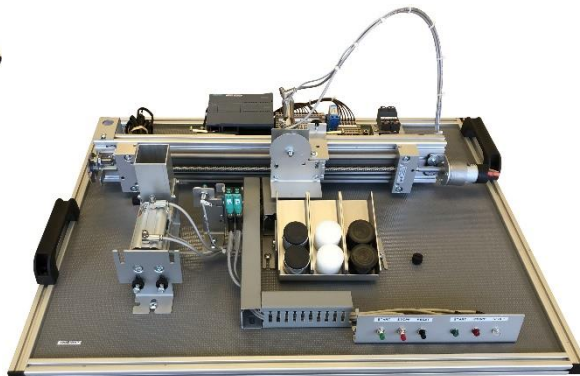

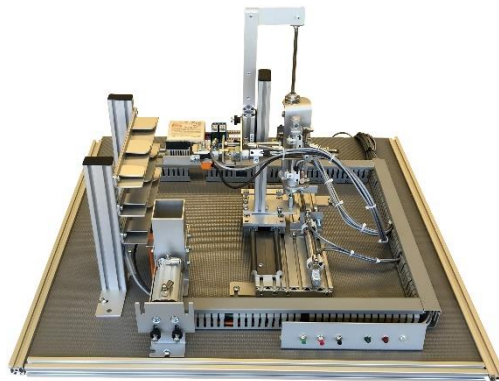

RFID system

Vision system

Encoder/position system

I/O Link

DC Servo

Complete Line with Sorting, Assembling and ASRS system
